

Álvaro Alexander Gonzalez Acosta

Professional profile

Economist with a strong foundation in Data Science, dedicated to solving complex real-world problems. I leverage my deep experience in econometric modeling, data analysis, and predictive model development to tackle challenges in finance. My work in banking, finance, and public policy has involved applying rigorous analytical techniques to large-scale datasets to uncover critical insights and inform high-stakes decisions. I am proficient in Python, R, and SQL for developing and deploying analytical models and skilled in Tableau and Power BI for communicating findings to diverse stakeholders. I am passionate about applying these skills to combat illicit activity and contribute to a safer financial ecosystem.

Education

ECONOMIST | 2007 | UNIVERSIDAD DE CARABOBO

Quantitative focus in Econometrics and Statistical Modeling, specializing in Time-Series Analysis.

- Developed a strong foundation in building and validating statistical models to identify patterns in complex data, directly applicable to detecting anomalies in financial transactions.
- Specialized in time-series analysis, a core skill for analyzing sequential blockchain data and identifying suspicious activities and threat vectors over time.
- Explored sequence modeling techniques, ideal for inferring latent behaviors—such as money laundering patterns—from observable sequences of financial transactions.

Experience

SYSTEM SUPPORT ANALYST | GROTOOL, LLC | APR 2021 – PRESENT

- Technical support to clients and users, monitoring labor data with Excel to make efficient management decisions in real-time and improve overall productivity and transparency.
- Management of the App database using SQL for calculating the payroll of workers in the agricultural sector.
- Created data reports in Power BI, to help clients make management decisions effectively communicating complex data to non-technical stakeholders.

FINANCIAL ADVISOR | COMUNICACIONES FINTECH | OCT 2017 - NOV 2020

- Developed investment strategies by analyzing complex financial market data with Python, including cryptocurrency transactional patterns and protocol-level dynamics (PoW/PoS), to optimize client resources.
- Demonstrated adaptability in a fast-paced environment by analyzing emerging cryptocurrency protocols (PoW, PoS, Smart Contracts) to design high-impact investment strategies for clients.

COSTS MANAGER | SERCOINFAL, C.A. | DEC 2010 – NOV 2013

- Developed and applied statistical analysis in R to data from over 20+ locations to identify anomalies in resource consumption, preserving company profit.
- Led an end-to-end resource optimization project, taking it from initial analysis in Excel to final implementation across 20+ industrial canteens.

STATISTICS ANALYST | BANCO CENTRAL DE VENEZUELA | JUN 2008 – DEC 2009

- Upheld high standards in Excel for statistical rigor by designing, applying, and establishing best practices for national surveys used in the calculation of the National GDP.
